Jeacher L. Application US/08852153

Sequence 1, Application US/08852153

Patent No. 5914766

GENERAL INFORMATION:
APPLICANT: Randazzo, Filippo
TITLE OF INFORMITON: Mammalian Sex Comb on Midleg Acts as a Tumor Suppressor NUMBER OF SEQUENCES: 8

CORRESPONDENCE ADDRESS:
ADDRESSEE: Chiron Corporation
STREET: 4560 Horton Street
CITY: Emeryville
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1247 GAGGGTATGCTGTTCCCGGTCAACACGGCTGAGATAACCTCACCACCATGGCCTTGCTT 1188

PT	New gastrointestinal tract specific polynucleotides, CS141 - used to
PŢ	develop products for the diagnosis and treatment of e.g. cancers,
PT	gastric ulcer, gastritis, Crohn's disease, ulcerative colitis or
ΡŢ	pancreatitis
PS	Claim 1; Page 93; 116pp; English.
ပ္ပ	The present sequence is a consensus sequence of a set of contiguous
ည	and partially overlapping EST sequences designated CS141. The sequences
႘	are isolated from a cDNA library made from gastrointestinal tract
ပ္ပ	tumour and normal tissues. The CS141 gene is useful as a marker for
ပ္ပ	gastrointestinal tract disorders. The methods and products can be
ပ္ပ	used in detecting, diagnosing, staging, monitoring, prognosticating,
ပ္ပ	preventing, or determining the predisposition to diseases and
ပ္ပ	conditions of the gastrointestinal tract, such as gastrointestinal
၁ ၂	tract cancers, Barret's esophagus, gastric ulcer, gastritis,
ပ္ပ	leiomyoma, polyps, Crohn's disease, ulcerative colitis, pantreatitis.

V63504-15 represent a set of contiguous and partially overlapping E: sequences designated CS141. The sequences are isolated from a CDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastritis, leiomyoma, polyps, Crohn's disease, ulcerative colitis, pantreatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              congenaaytayttygenttyaarathtgywsnggngengenaaygtngtnggneenaen

of which, in non-colon tissue samples, can be used as indication of colon cancer metastasis

Slaim 1: Fig 4: 60pp; English.

13 cDNA clones (74580-92), most of them partial clones, correspond to human colon specific genes, designated CSG1, CSG2, etc., that care primarily expressed in tissues derived from the colon. CSG7 and CSG10 show reduced expression in colon cancer cells as compared to that in normal cells; the remaining genes are overexpressed in colon cancer. The partial cDNA sequences can be used to isolate full-length clones and genomic clones including the complete gene. CSG nucleic acids can be used to produce CSG polypeptides (see also W06545-53) in transformed host cells, as probes to detect disorders of the colon, partic. colon cancer and colon cancer metastasis, and
                                                                                                                                                                                                                                                                                                                                                                                                 504

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EST
                                                                                                                                                                                                                                                                                                                 Gaps
             cDNA clones of colon specific genes. The polynucleotides can be used as probes to detect expression of the corresponding human genes, e.g. diagnostic assays for detecting micrometastases of colon cancer. Recombinant cells containing the polynucleotides can be used to produce the polypeptides, in order that antibodies can be raised and used in further screening or diagnostics. 173 G; 107 T;
                                                                                                                                                                                                                                                                                                                                                                                                                      9

V63504-15 represent a set of contiguous and partially overlapping Exsequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting,

Claim 1; Page 91; 116pp; English.
V63504-15 represent a set of contiguous and partially overlapping EST
sequences designated CS141. The sequences are isolated from a cDNA
library made from gastrointestinal tract tumour and normal tissues.
The CS141 gene is useful as a marker for gastrointestinal tract
disorders. The methods and products can be used in detecting,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              volument, represent a set of contiguous and partially overlapping EST sequences designated CS141. The sequences are isolated from a CDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, stading, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastriits, lelomyoma, polyps, Crohn's disease, ulcerative colitis, pantreatiis, lelomyoma, polyps, Sequence 228 BP; 63 A; 48 C; 68 G; 49 T; V63504-15 represent a set of contiguous and partially overlapping EST sequences dealigated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastritis, leiomyoma, polyps, Crohn's disease, ulcerative colitis, pantreatitis, leiomyoma, polyps, Sequence 287 BP; 54 A; 85 C; 87 G; 58 T;

Claim 1; Pages 91-92; 116pp; English.
V63504-15 represent a set of contiguous and partially overlapping EST sequences designated CS141. The sequences are isolated from a cDNA library made from gastrointestinal tract tumour and normal tissues. The CS141 gene is useful as a marker for gastrointestinal tract disorders. The methods and products can be used in detecting, disponsing, stading, monitoring, prognosticating, preventing, or determining the predisposition to diseases and conditions of the gastrointestinal tract, such as gastrointestinal tract cancers, Barret's esophagus, gastric ulcer, gastrointestinal tract cancers, crohn's disease, ulcerative colitis, pantreatitis, leiomyoma, polyps, crohn's disease, ulcerative colitis, pantreatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     195 ygcnttyaarathtgywsnggngcngcnaaygtngtnggnccnacnatgtgyttygarga 254

DNA fragment contg. streptomycin resistance gene and its regulatory sequence from Streptomyces griseus 4-1 strain (FERM BP-1198).
Antibiotic-resistance; selection marker; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              as
                                                                                                                                                                          develop products for the diagnosis and treatment of e.g. cancers, gastric ulcer, gastritis, Crohn's disease, ulcerative colitis or parcreatitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; Fig 3; 41pp; Japanese.
Disclosure; Fig 3; 41pp; Japanese.
The DNA fragment can be inserted into an actinomycetes plasmid vector (e.g. plJ720) to give a hybrid plasmid which may be used streptomycin resistance selection marker.

Polynucleotide(s) and proteins derived from Staphylococcus aureus - stored on computer readable medium and used in the production of anti-S.aureus vaccines

Claim 1: Page 1531-1532; 3271pp; English.

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are industrial importance can be obtained. Specifically, sequences which are polypeptides can also be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelld infections, food poisoning, osteomyellitis, sydnome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can the computer readable medium of the S.aureus DNA sequences contained on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the sequence listing in the specification. They are included to maintain the nucleotide numbering given in the specification for this DNA sequence."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Location/Qualifiers

This sequence represents a nucleic acid molecule designated Gene 4 from the human cDNA clone HEBND56 (deposited as clone ATCC 97955 and ATCC 209074) which encodes a secreted human protein. This gene maps to chromosome 4 and is abundantly expressed in parathyroid tumour. It is useful for diagnosis and treatment of disorders of the nearvous system and the protein products are useful in modulating calcium metabolism. The invention relates to 20 novel genes and their fragments (V69611 to V69630) and corresponding secreted proteins (W83931 to W83950) which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human secreted protein gene 4 clone HEBND56.

useful for preventing, treating or ameliorating medical conditions e.g.

by protein of gene therapy. Also pathological conditions can be diagnosed
by protein of gene therapy. Also pathological conditions can be diagnosed
by determining the amount of the new polypeptides in a sample or by
determining the presence of mutations in the polynucleotides. Specific
uses are based on which tissues they are most highly expressed in, and
include developing products for the diagnosis or treatment of central
nervous system (CNS) and immune system diseases, reproductive disorders,
cancers, congenital malformations, degenerative diseases, trauma,
inflammatory disease, neoplasia, metabolic disorders, diseases in testes,
placenta, liver, brain and activated T cells, spleen diseases, lung
diseases, heart diseases, rhabdomyosarcoma and disorders of the endocrine
system or other endocrinopathies, e.g. endocrine polyglandular syndrome,
endocrinoma, and endocrine ophthalmopathy, osteoclastoma and other bone
cremodelling disorders, bacterial infections and sepsis. The polypeptides
are also useful for identifying their binding partners.

This DNA encodes a human interleavish: 12 (IL-12) p40 subunit. This is used in the construction of plasmid for expressing recombinant eukaryotic genes. The plasmid comprises a first transcription unit comprising control sequences linked, in order, to a 5'-untranslated region (UTR), synthetic intron, a coding sequence and synthetic 3'-untranslated region (CTR), synthetic intron, a coding sequence and synthetic 3'-untranslated region (CTR), synthetic intron, a coding sequence and synthetic 3'-untranslated region (CTR), synthetic intron, The first coding sequence and second coding sequence construction. The first coding sequence and second coding sequence comprise a sequence coding for p40 subunit of human IL-12 and a sequence coding for p35 subunit of human IL-12. The plasmids are used for therapeutic gene delivery, especially for treating asthma and cancer. They are also useful as adjuvants for vaccines. IL-12 is known to stimulate natural killer cells, to promote maturation of cytotoxic T cells and to induce cytokine production by these cells. They stimulate cells and to induce exposines in cases of microbial or viral infection, some cancers, allergies and asthma. Co-ordinated expression of two subunits from a single plasmid is now possible, avoiding the difficulties associated with transfection with two separate plasmids.
                                                                                                                                                                                                                                                                                                                                                                                                                    ó
single xylanase B domain, was obtd. by genomic walking PCR of DNA from extreme thermophilic strain TG456 (CBS 213.94), isolated from a New Zealand hot spring. The gene can be inserted into a vector and used for the prodn. of recombinant xylanase B in microbial host cells, esp. Escherichia coli.

                                                                                                                                                                                         Claim 2; Fig 8a; 64pp; English.

A composite CDNA sequence (T30309) codes for the human transcription factor, SOX-9 (R97646). It was deduced from cDNA clones obtd. from a testis CDNA inhibrary using a SOXA HMG (high mobility gp.) probe. The gene appears to play a role in skeletal development. It has been mapped to chromosome 17 within a region which contains CMPD!, the locus for camponelic dysplasia (CD). Alterations in SOX-9 can cause both CD and male to female sex reversal. The cDNA can be used in the prepn. of recombinant SOX-9 polypeptide. DNA or recombinant protein may be injected into joint tissue for treatment of cartilage or bone damage. SOX-9 can also be used as a tool for studying bone formation and sex determination. Sequence 3934 BP; 966 A; 1100 C; 901 G; 967 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2780 CACTAAAAGAGTGTGTGTGTGTGCGACGCACCGTTTAAAGGCTCAAGGTGTTTTTCTC 2721

* NOTE: This is a 'working draft' sequence. It currently consists of 53 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu/gsc Waltes Loun, Submission
Direct Submission
Submitted (21-DEC-1999) Department of Genetics, Washington
University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
On May 5, 1999 this sequence version replaced gi:4337266. NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions. all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by The actual start of this clone is at base position 1 of GS1-146J4; actual end is at 132319 of GS1-146J4.

Location/Qualiflers
1. 132319 This clone is from the first BAC library from Genome Systems, Inc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Direct Submission

Submitted (24-FEB-1999) Genome Sequencing Center, Washington
University School of Medicine, 4444 Forest Park Parkway, St. Louis,
MO 63108, USA

On Mar 1, 1999 this sequence version replaced gi:4263454.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 19 contigs. The true order of the places

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                           Caenorhabditis elegans.

```
progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coii, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments. Contig_ID: 00031 Length: 2632bp Contig_ID: 00331 Length: 3732bp Contig_ID: 00382 Length: 3732bp Contig_ID: 00382 Length: 3732bp Contig_ID: 00556 Length: 3905bp Contig_ID: 00596 Length: 3905bp Contig_ID: 00595 Length: 3905bp Contig_ID: 00997 Length: 5385bp Contig_ID: 00995 Length: 4319bp Contig_ID: 01363 Length: 11549bp Contig_ID: 01363 Length: 1436bp Contig_ID: 01363 Length: 1436bp Contig_ID: 01363 Length: 32002bp Contig_ID: 01509 Length: 32002bp Contig_ID: 01509 Length: 32002bp Contig_ID: 01509 Length: 3180bp Contig_ID: 01509 Length: 3180bp Contig_ID: 01509 Length: 3180bp Contig_ID: 02156 Length: 18373bp Contig_ID: 02156 Length: 18373bp Contig_ID: 021576 Length: 18373bp Contig_ID: 022576 Length: 18373bp Contig_ID: 022576 Length: 18373bp Contig_ID: 022576 Length: 18373bp Contig_ID
On Feb 16, 2000 this sequence version replaced gi:6691734.
Incomparing the sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             * arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  263 3432; gap of 200 bp 24.032 bp in length 343 7164; contig of 3732 bp in length 7165 7044; gap of 800 bp 7065 17250; contig of 9286 bp in length 17251 18050; gap of 800 bp 800 bp 18051 31751; contig of 13701 bp in length 31752 32551; gap of 800 bp 23552 71375; contig of 38024 bp in length 71376 72175; gap of 800 bp 72176 76080; contig of 3805 bp in length 71376 76080; contig of 3805 bp in length 76080; gap of 800 bp

It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence. It currently a consists of 53 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence as soon as it is available and the accession number will * be preserved.
                                                                                                                                                                                                                                                                                                            length

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov, or see http://genome.wustl.edu/gsc
NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                    This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SOURCE INFORMATION:
```

This clone is from the first BAC library from Genome Systems, Inc. (http://www.genomesystems.com).

It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                contig of 784 bp in length gap of unknown length contig of 794 bp in length contig of 794 bp in length gap of unknown length contig of 836 bp in length gap of unknown length contig of 833 bp in length gap of unknown length contig of 798 bp in length gap of unknown length contig of 668 bp in length gap of unknown length contig of 692 bp in length gap of unknown length contig of 692 bp in length gap of unknown length contig of 1252 bp in length gap of unknown length contig of 1252 bp in length gap of unknown length gap of unknown length gap of unknown length contig of 1352 bp in length gap of unknown length gap of unknown length contig of 1314 bp in length gap of unknown length contig of 1363 bp in length gap of unknown length contig of 803 bp in length gap of unknown length contig of 803 bp in length gap of unknown length

On Feb 16, 2000 this sequence version replaced gi:6911686.

IMPORTANIT This sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments. Contig_ID: 01053 Length: 50802bp

On Feb 16, 2000 this sequence version replaced gi:6977930.

IMPORTANT: This sequence ls unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

On Feb 16, 2000 this sequence version replaced gi:6911627.
IMPORTANT: This sequence is unfinished and does not necessarily
represent the correct sequence. Work on the sequence is in
progress and the release of this data is based on the understanding
that the sequence may change as work continues. The sequence may
be contaminated with foreign sequence from E.coli, year, vector,
phage etc. Order of segments is not known; 800 n's separate
segments. Contig_ID: 00372 Length: 3719bp

```
the Hexamer program which was written by Richard Durbin as an integral part of the ACEDS-based analysis tools for the C.elegans Genome Sequencing Project. The program calculates the log-likelihood score for a given DNA segment based on the frequency of 6 mers, normalised for the base-pair composition of the genome. The program was trained using a fasta file of confirmed Leismania major coding sequences (CDS), i.e. from ATG start codon to the stop
                                                                                                                                                                                                                                                                                                             CAUTION: We may not have predicted the correct initiation codon. Where possable we choose an initiation codon (atg) which is preceded by a stretch of pyrimidines or part of a Kozak sequence. If this cannot be identified we choose the most upstream initiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      complement(1111. .3867)
//gene=1.4/68.01
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transmembrane domains were predicted as implemented at the TMHMM server: http://www.cbs.dtu.dk/services/TMHMM-1.0/
IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.

Cosmid L4768 does not overlap any sequenced cosmids to date.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note="region of BLASTN similarity to bases 11104...1

The sequence of the packaged vector was determined by Peter Myler and Ken Stuart at Seattle Biomedical Research Institute, and is available as accession number U5931.

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codons is given for each CDS.

Usually the highest socing match found by fast -o is given for CDS which show significant similarity to other CDS in the database.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AL132763.1 GI:6165382

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Details of leishmania sequencing at the Sanger Centre are available on the World Wide Web.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   see http://www.sanger.ac.uk/Projects/L_major/
CDS are numbered using the following system eg L4768.01. L4768
(cosmid name). 01 (first CDS)
To make the cosmid library Leishmania major Friedlin DNA was
partially disested with Sau3A1 prior to cloning into BamHI site of
the cosmid shuttle vector cLHYG (Ryan et al. 1993 Gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bothe, G., Pohl, T., Ivens, A.C., Lawson, D., Murphy, L., Quail, M., Rajandream, M.A. and Barrell, B.G.
